CRYPTOZOOLOGY OF THE PNW SUMMER CAMP

CURIOUS WHAT CREATURES LURK IN THE SHADOWS OF THE PACIFIC NORTHWEST?

Join us to explore different habitats and discover how scientists study elusive creatures and what separates solid science from quackery. The real thing is often stranger than fiction!

- Build your own plankton net and search for the spawn of the Pacific NW Tree Octopus.
- Examine museum specimens for evidence of evolution.
- Visit the beach at low tide to hunt for mini monsters and learn how following the clues in Coastal Salish sea serpent stories led scientists to geologic discoveries.
- Each day will include hands-on/minds-on science and a field trip or hike in a local park.

**RISING 5TH, 6TH & 7TH
